Providing technical reviews and write-ups during the cohort selection process and acting as a technical mentor for companies selected into the program.

AWARDS

OCT 2022 - Mayor's Award for Volunteer Spirit

Andrew Kandalajt · 1st

Software Engineer at Datadog

July 1, 2018, Andrew worked with Patrick but on different teams

Patrick is among the best engineers I ever worked with. Not only does he have a large depth of knowledge on essentially every topic, he is also very forward thinking - always keeping up with better ways to do things and pushing us all to be better.

In my opinion, as strong as his engineering skills are, its rivalled by his ability to build and manage strong teams. In just a short time he managed to build one of the best teams I've seen. A team that's not only focused and work together so well, but work so productively in which most teams only hope to emulate.

On top of that, he is incredibly popular around the office and throughout the company. He is a mentor to many people, some telling me personally of their wish to be mentored by him as he made us all better. He is also always involved in the community inside the office and the engineering community within the city and beyond.

If you're a forward thinking company, looking to move quickly, be very productive, and push the boundaries in engineering I would highly recommend trying to convince Patrick to join your team.
